### Disclosures

Chairman Committee on Mental Health Information Technology  
American Psychiatric Association

Chief Medical Information Officer  
PrairieCare

President and Owner  
Exponential Innovations

I **do not** have any financial interests in any aids or applications discussed today

---

---

---

---

---

---

---

---

### Digital Aids and Applications Objectives

1. Understand the landscape of the medical apps marketplace
2. Describe tools available to evaluate the quality of apps and their use in clinic care
3. Consider the impact of artificial intelligence and deep learning on future offerings and clinical practice

---

---

---

---

---

---

---

---

## What Is Digital?

- Digital electronics - electronic circuits which operate using digital signals
- Digital camera - which captures and stores digital images
- Digital computer - a computer that handles information represented by discrete values
- Digital data - discrete data, usually represented using binary numbers
- Digital signal (signal processing), sampled analog signals represented as a sequence of digital values

---

---

---

---

---

---

---

---

## Socioeconomic Phenomena

**Digital culture** - the anthropological dimension of the digital social changes

**Digital divide** - a form of economic and social inequality in access to or use of information and communication technologies

**Digital economy** - an economy based on computing and telecommunications resources

---

---

---

---

---

---

---

---

## Digital

```

## Future challenges for digital healthcare

Published Wednesday 26 April 2017 By Linda Brookes, M.Sc.

The digital health "revolution" appears to be well under way. According to a recent survey by the American Medical Association, the vast majority of physicians believe that adopting digital health tools will improve their ability to care for their patients.

https://www.medicalnewstoday.com/articles/317022.php

Very few articles given all of the excitement!

"From ineffective electronic health records, to an explosion of direct-to-consumer digital health products, to apps of mixed quality, [these products are] the digital snake oil of the early 21st century."

James L. Madara, M.D., CEO of the AMA

<https://www.ama-assn.org/ama-ceo-outlines-digital-challenges-opportunities-facing-medicine>

### AMA Digital App Guidelines

- Support the establishment or continuation of a valid patient-physician relationship;
- Have a clinical evidence base to support their use in order to ensure mHealth app safety and effectiveness;
- Follow evidence-based practice guidelines, to the degree they are available, to ensure patient safety, quality of care and positive health outcomes;
- Support care delivery that is patient-centered, promotes care coordination and facilitates team-based communication;
- Support data portability and interoperability in order to promote care coordination through medical home and accountable care models;
- Abide by state licensure laws and state medical practice laws and requirements in the state in which the patient receives services facilitated by the app;
- Require that physicians and other health practitioners delivering services through the app be licensed in the state where the patient receives services, or be providing these services as otherwise authorized by that state's medical board; and
- Ensure that the delivery of any services via the app be consistent with state scope of practice laws.

**Looking for a mental health app?**  
There are many to choose from, and we're here to help.

**How PsyberGuide Works**  
PsyberGuide uses three criteria to review mental health apps.

- Credibility**: The Credibility Score represents the strength of the scientific research support for the app itself, and the therapeutic interventions the app provides.
- User Experience**: Our collaborators use the Health App Rating Scale (HARS) to assess the design, accessibility of information, and overall experience that the app provides.
- Transparency**: The Transparency Score represents the clarity of an app's privacy policy in detailing the data storage and collection procedures of a mobile health product and its associated servers.

---

---

---

---

---

---

---

## APA App Evaluation

Grounded in the belief that any decision between a provider and a patient is a personal decision based on many factors, for which there is rarely a binary 'yes' or 'no' answer.

**Goal:** help providers consider important information that when picking an app

---

---

---

---

---

---

---

---

## APA App Evaluation Areas / Steps

1. General Information
2. Safety / Privacy
3. Evidence (i.e., effectiveness)
4. Ease of Use
5. Interoperability

- Ordered
- Not absolute - No minimum or maximum number of levels necessary for an app to be considered "good" or "useful".
- Patient Centered - There may be cases where an app fills few levels but you and a patient still want to use it

\* Of note, while we offer examples of how to use this model, we do not explicitly rate apps. Given that apps are constantly updating and changing, such information would quickly be out of date. Also, determining the inherent usability is very subjective and depends on how both you and the patient experience and feel after examining it.

---

---

---

---

---

---

---

---

## General Information

- What is the business model? Who is the developer? Does it claim to be medical?
- What is the cost? Does it require in-app purchases to unlock certain features? Does it integrate advertising into its usability?
- On which platforms does it work (e.g., iOS, Android)?
- When was it last updated?

<https://www.psychiatry.org/psychiatrists/practice/mental-health-apps>

---

---

---

---

---

---

---

---

### Risk/Privacy & Security

- Is there a privacy policy? Are cookies placed on your device?
- What data are collected? Are personal data de-identified? Can you opt-out of data collection? Can you delete data?
- Who are data shared with / What data are shared? Are data maintained on the device or the web (i.e., "the cloud")? Both?
- What security measures are in place? Are data encrypted on the device and server? Does it purport HIPAA compliance? / Does it need to be HIPAA-compliant?

<https://www.psychiatry.org/psychiatrists/practice/mental-health-apps>

---

---

---

---

---

---

---

---

### Evidence

- What does it claim to do vs. what does it actually do?
- Is there peer-reviewed, published evidence about tool or science behind it?
- Is there any feedback from users to support claims (App store, website, review sites, etc.)?
- Does the content appear of at least reasonable value?

<https://www.psychiatry.org/psychiatrists/practice/mental-health-apps>

---

---

---

---

---

---

---

---

### Ease of Use

- Is it easy to access for the patient at hand (i.e., based on patient diagnosis or other factors)? Would it be easy to use on a long-term basis?
- Is the app or are features of the app customizable?
- Does it need an active connection to the Internet to work? What platforms does it work on?
- Is it accessible for those with impaired vision or other disabilities? Is it culturally relevant?

<https://www.psychiatry.org/psychiatrists/practice/mental-health-apps>

---

---

---

---

---

---

---

---

## Interoperability

- Who “owns” the data (i.e., patient, provider, developer)?
- Can it share data with the EHR?
- Can you print out your data?
- Can you export/download your data?
- Can it share data with other user data tools (eg, Apple HealthKit, FitBit)?

<https://www.psychiatry.org/psychiatrists/practice/mental-health-apps>

---

---

---

---

---

---

---

---

## Regulatory Implications / Guidance?

---

---

---

---

---

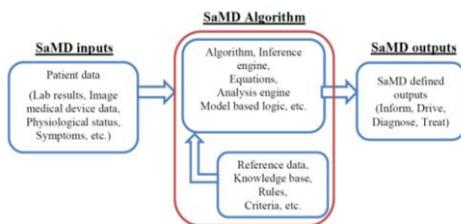

---

---

---

## FDA Regulations

Software as a Medical Device (SaMD): Clinical Evaluation

---

---

---

---

---

---

---

**Review of use and integration of mobile apps into psychiatric treatments.**

Mobile apps are versatile. Integrating apps into psychiatric treatment requires addressing both patient and clinical workflows, design and usability principles, accessibility, social concerns, and digital health literacy.

Review of use and integration of mobile apps into psychiatric treatments.

---

---

---

---

---

---

---

Even with big advancements of AI application in healthcare over the recent years, it is unlikely that technology will replace the diagnostic role of physicians- at least in the near future. AI, however, is now sophisticated enough to take over the tedious repetitive tasks that used take up the productive hours of a physician.
